Tweak Master is a very simple utility created to provide its users with easy access to several utilities in Windows. This application offers a number of tools to change some of the aspects of the operating system; this includes the security and privacy options of the operating system. The program offers a few options that allow its users to disable specific features of Windows; it also provides them with the possibility to customize some of the systems settings. Some of the tools

available to the users may not work with all versions of Windows; the tools available in the application will be discussed below.

Privacy The Privacy tool allows the user to customize several options for the protection of the privacy of the operating system and its data. It includes options to disable some of the services and programs installed in Windows; these include Internet Explorer, file and printer sharing, selecting the default profile for the operating system, creating files, editing default settings for the operating system, and specifying which security policy to

use. In addition to being able to change a number of system settings, the Privacy tool also allows the users to disable certain security features, such as the RUN program or the Command Prompt. The program also gives users the possibility to change the background image of the Internet Explorer. It also allows changing the search engine in Internet Explorer. Network One of the options offered by Tweak Master is the possibility to turn off file and printer sharing. Also, the program allows the disabling of dial-up networking. It is worth mentioning that this utility is not

compatible with some of the older versions of Windows. **Start Menu** The Start Menu tool allows the user to customize the Start Menu as well as the Startup folder. The user can enable the options of the Program Compatibility Assistant and the Search Folder. It is also possible to customize the name of the Start Menu folder. **File Manager** The file manager tool allows the user to customize the path where the Windows file manager will search for folders and the drive on which a specific folder is located. Also, the search can be made case-insensitive. **Windows Registry**

The Windows Registry tool allows the user to customize the start menu of the computer. This tool offers options to customize the path that the Search function will use in the registry to look for information. The user also has the possibility to customize the name of the registry root key. Internet Explorer The Internet Explorer tool allows the user to change the background image of the web browser as well as its size. MS-DOS Tweak
